1. The following is an examiner's statement of reasons for allowance: The primary reason for allowance is that JP 2000103022 A teaches that the first resin layer 2A should have more resin content relative to the filler than the second resin layer 2B which should have more filler relative to the resin, which is the opposite of the instant invention which requires that the content ratio of the filler in the second intermediate resin layer with respect to the resin ingredient of the second intermediate resin layer is smaller than a content ratio of the filler in the first intermediate resin layer with respect to the resin ingredient of the first intermediate layer. See paragraph 0046 of the machine translation of JP '022 as well as the example at paragraph 0055 which has the filler amount in layer 2A of 50% of the weight and the filler amount in layer 2B of 60% of the weight. There is nothing on the record which would have made it obvious to have employed a higher amount of filler in the first intermediate layer than in the second intermediate resin layer since JP '022 teaches the opposite configuration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
